DIMENSION DATA AMERICAS TEAM TO PRESENT EMERGING VIDEO AND COLLABORATION TECHNOLOGIES PANEL AT INTEROP 2014 CONFERENCE

Dimension Data, the **$5.8 billion global ICT solutions and services provider**, will present a team of experts at this year's Interop conference to discuss disruptive trends and share insights about the visual collaboration space.

Interop Las Vegas, the leading independent technology conference and expo designed to inspire and inform the world's IT community, reached-out to Dimension Data to provide a panel of experts both skilled on the subject matter and independent of any individual manufacturer. The panel will discuss such emerging technologies as WebRTC, SVC, H.265 (HEVC), and will examine the latest information about interoperability, virtual MCUs, and hardware vs. software in general. They will also discuss and evaluate the emergence of the new, sub $1K class of video endpoints.

The panel will be led by **David Danto**, Dimension Data's Principal Consultant in the video and collaboration space. Joining David will be **Lawrence Imeish**, Principal Consultant for UC and networks, **Anthony Vitnell**, UC Solution Architect and **Christopher Wulf**, Manager of Converged Communications Solutions Architects. This team, with a combined 75 years of industry experience, works with Dimension Data's clients on a daily basis to evaluate, architect and/or install unified collaboration systems. They are familiar with and skilled in systems from many manufacturers - including firms such as Acano, Avaya, Cisco, Microsoft, Pexip, Plantronics, and Polycom.

Their session, Emerging Video Technologies, takes place at the Mandalay Bay Conference Center on Friday April 4th at 10:30am. Information about Interop can be found at **www.interop.com/lasvegas**. Information about and questions for the panel can be sent to **David.Danto@dimensiondata.com**.   If you'll be attending Interop, please reach out to the team to schedule a one-on-one meeting. David and his colleagues will be happy to brief you on what's happening in the ICT industry and explain how Dimension Data can help your organization solve problems and/or architect a future-proof collaboration strategy.

Attend the session and Tweet about it and you can win a Plantronics Voyager Legend UC BlueTooth Headset! Just include **@interop** , **@DimensionDataAM** and **@NJDavidD** in your tweet. We'll pick one at random as the winner.
